Solenoid Coil Properly Installed

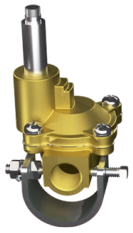

When the solenoid coil is properly installed, pressing reset on the CoilKeeper clears any previous supervisory signal to the fire panel and indicates a normal state

Solenoid Coil Improperly Installed

If the solenoid coil is improperly installed on the actuator, the CoilKeeper indicates a supervisory condition to the fire panel. Ensure the coil is properly installed on the actuator and reset the CoilKeeper and the fire panel per the manufacturer's instructions to clear the supervisory condition.

Solenoid Coil Missing

The CoilKeeper also indicates a supervisory condition if the solenoid coil is completely removed. The CoilKeeper latches the supervisory condition until the solenoid coil is properly installed and CoilKeeper is reset, which clears the supervisory indication.

Remote Installation

In addition to direct installation onto the solenoid, the CoilKeeper can be remotely mounted within five feet of the solenoid valve. Wires attach to the included sense bracket and clamp to complete a circuit through the coil.
